

IRD Balancing launches the New and Improved Model 290 *SERIES* Balancing Instrument

This rugged instrument represents our ongoing commitment to *Setting the Standard* in Balancing Instruments. The New Model 290 is a computer based Balancing Instrument with unmatched performance in balancing all types of rotors on Soft and/or Hard bearing balancing machines.

Easy to Use - This simple, easy to use instrument has been developed with an intuitive user interface, making it ideal for use by either expert or novice personnel. The New Brighter Color Display with Improved Definition also makes the instrument easy on the eyes.

Reliable - Improved Internal Components and Manufacturing Techniques provide greater reliability and lower power consumption.

High Performance - New Pentium Based CPU with an internal Flash Drive permitting Faster Operation and More Efficient data storage.

One Run Balancing Capability – The instrument can be used in conjunction with balancing machine auto-calibrators to provide ‘one run’ balancing capability.

Hard Bearing Capability - The instrument can also be used to upgrade hard bearing type balancing machines replacing older out-dated instrumentation.

Anyone can use the Model 290 to balance rotors with only very basic training. Once the instrument is calibrated, the operator simply needs to enter the rotor dimensions, spin the rotor and read the unbalance corrections on the graphic display. The 290 electronics provides a wide range of balancing speeds, high measurement accuracy and unique signal filtering. Low speed precision balancing is a major feature of the Model 290.
